

Security

Directory to store Attachments :

Any valid directory to store attachments. Set to empty string to disable attachments

Security hint : move it outside web access, default relative path is not secured and should be used for tests only

Directory to store Documents :

Any valid directory to store files for document versions

Security hint : move it outside web access, default relative path is not secured and should be used for tests only

Log file name :

Any valid file name, including path. May contain '{\$date}' to get 1 file per day

Security hint : move it outside web access, default relative path is not secured and should be used for tests only

Log level :

Defines the level of traces written in the log file.

You'll be able to change this afterwards on administration screen

Parameter file name :

File name with path where to store current parameters. Must be a .php file name.

Security hint : move it outside web access, default relative path is not secured and should be used for tests only

Configuration parameters will be saved to above file
